

OFFICEX.PRO

FIGMA DESIGN REVIEW

Gap Analysis, Recommendations & Required UI/UX Changes

Developer / Scalezix Review

Discover • Transact • Operate • Optimize

1. Executive Summary

Thank you to the Scalezix team for the proposed OFFICEX UI/UX layouts. The design has a clean, professional enterprise-SaaS visual language and provides a strong foundation, particularly around commercial real-estate leasing, FM procurement, vendor management, work orders and payments/escrow.

However, our review against the broader OFFICEX.PRO product blueprint indicates that the current design is weighted more towards a Commercial Real Estate Leasing CRM + FM Vendor Marketplace + Property Administration platform, whereas the intended OFFICEX proposition is broader: an integrated Workplace Operating Platform covering Discover → Transact → Operate → Optimize.

We therefore recommend retaining the current visual foundation and much of the existing transactional workflow, while strengthening the product architecture, role-based experiences, workplace layer, operational intelligence and cross-module data model before the UI/UX is frozen for development.

2. Overall Review Position

Area	Assessment	Recommendation
Visual design	Strong enterprise SaaS foundation	Retain and refine
Marketplace	Good foundation	Enhance with OFFICEX Score and richer listing data
Leasing CRM	Strong and relatively complete	Retain and integrate with SaaS
FM Marketplace	Good foundation	Enhance with outcome-based metrics
Tenant experience	Major gap	Add dedicated tenant dashboard and workplace layer
Employee experience	Major gap	Add workplace/mobile experience
FM Command Centre	Needs expansion	Introduce Workplace Health and exception management
Outcome-Based FM	Major gap	Build outcome/SLA/experience layer
Asset intelligence	Needs expansion	Make asset a first-class platform object
Analytics	Needs stronger decision support	Add health scores, benchmarks and recommendations
Mobile	Not sufficiently represented	Create task-first workplace mobile UX
Cross-module architecture	Major gap	Connect property, space, asset, tenant, vendor and work-order data

3. Recommended OFFICEX Product Architecture

The product should be structured around four connected journeys:

Journey	Product Layer	Core Capabilities
DISCOVER	OFFICEX Marketplace	Properties, office spaces, managed offices, coworking, meeting rooms, FM vendors, workplace services
TRANSACT	OFFICEX Transactions	Leads, enquiries, visits, proposals, negotiation, LOI, lease, RFQ, quote comparison, award, contract, escrow
OPERATE	OFFICEX.PRO	Workspace, tenant management, helpdesk, FM, assets, preventive maintenance, compliance, vendors, work orders, costs, energy
OPTIMIZE	OFFICEX Intelligence	Workplace Health, Property Health, Asset Health, Vendor Performance, Outcome-Based FM, analytics, benchmarking, recommendations and AI

4. Major Gap — Tenant / Occupier Experience

The current design is strong from the property owner, leasing and FM perspective, but the actual tenant/occupier operating experience is not sufficiently represented.

Recommended OFFICEX Tenant Dashboard:

- Dashboard KPIs: Occupancy, Monthly Workplace Cost, Open Requests, SLA Compliance, Employee Satisfaction and Workspace Utilization.
- Quick Actions: Book Desk, Book Meeting Room, Raise Request, Visitor, Parking, Report Issue and Service Request.
- Modules: My Workplace, Bookings, Requests, Visitors, Parking, Meeting Rooms, Documents, Bills/Costs and Feedback.

5. Employee / Workplace Mobile Experience

A dedicated employee-facing workplace experience is required. The mobile interface should be task-oriented rather than simply a responsive copy of the desktop dashboard.

Recommended bottom navigation: Home | Book | Requests | Visitors | More.

Recommended home actions: Book Desk | Meeting Room | Raise Request | Visitor | Parking.

6. FM Command Centre Needs to be Strengthened

The current portfolio dashboard contains useful portfolio KPIs, occupancy information, tenant portfolio data and maintenance queues. However, it functions more as a Property Management Dashboard than an FM Command Centre.

Recommended primary experience: WORKPLACE HEALTH — 91 / 100.

Supporting dimensions: Facility 94; Asset 97; SLA 96; Cleanliness 94; Energy 87; Experience 91; Vendor 93.

The command centre should immediately identify Critical, At Risk and Healthy items and answer: "What requires management attention today?"

7. Outcome-Based FM Needs to be Built Into the UX

The current vendor rating screen is a useful starting point, but vendor rating is not the same as outcome-based FM.

Recommended progression: Activity → SLA → Quality → Outcome → Experience → Cost.

Example measures: Workplace Cleanliness 94%; Washroom Experience 91%; Cleaning SLA 97%; Repeat Complaints down 18%; Employee Satisfaction 4.5/5.

8. Asset Management Needs to Become a First-Class Module

The asset should become a primary data object rather than being represented mainly through work-order activity.

Recommended asset profile: Asset ID, asset type, location, building, floor, space, criticality, status, health score, AMC, warranty, last service, next PM, breakdown history, energy consumption, documents and QR code.

9. Property → Building → Floor → Space → Asset Data Hierarchy

The platform should not treat Property, Tenant, Lease, Asset and Work Order as disconnected modules.

Recommended hierarchy: Portfolio → Property → Building → Floor → Space → Tenant / Occupant → Assets → Services → Work Orders → Vendors → SLA / Cost / Outcome.

This relationship should be reflected in both the UX and the underlying product/data architecture.

10. Lease-to-Operations Journey Needs to be Connected

The existing leasing workflow is one of the stronger parts of the Figma. The journey should, however, continue after Lease Executed.

Lease Executed → Tenant Onboarding → Workspace Configuration → Building/Floor/Space Setup → Asset Registration → FM/Vendor Setup → Service Configuration → Go Live.

11. Property Listing Builder Needs Expansion

Recommended multi-step listing wizard: Basic Information; Location; Building Details; Available Area; Floors/Units; Floor Plans; Photos/Videos; Amenities; Parking; Power/HVAC; Certifications; Commercial Terms; Availability; Documents; Preview; Publish.

12. OFFICEX Property Score

The marketplace should introduce a proprietary OFFICEX Property Score to move beyond conventional property listings.

Example: OFFICEX PROPERTY SCORE — 86 / 100.

Dimensions: Location 94; Building Quality 89; Accessibility 91; Amenities 84; Value 82; Operational Readiness 88.

13. Property Detail Page — Recommended Enhancements

Add: OFFICEX Property Score; Rent/sq.ft.; Estimated occupancy cost; Cost/seat; Operational readiness; Energy score; Location/commute score; Tenant suitability; Compare; Download Property Pack; Request Proposal; Request Site Visit.

14. Leasing CRM — Retain the Existing Strength

The current leasing dashboard, lead management, pipeline, site visits, LOI/Lease workflow, lease registry and commission tracking provide a strong foundation. The recommendation is enhancement and integration rather than redesign.

15. Quote Comparison — Introduce OFFICEX Vendor Score

The current quote comparison should be retained and enhanced with a standardized Vendor Score. Suggested weighting: Price 25%; SLA 20%; Technical Capability 15%; Quality 15%; Compliance 10%; Experience 10%; Sustainability 5%.

Example: Recommended Vendor — TechServe Solutions, 91/100.

16. Compliance Should Become a Core Dashboard

Compliance should become an actionable command centre rather than only a tracking capability.

COMPLIANCE HEALTH — 96%.

Categories: Fire NOC, Lift, Electrical, DG, Pollution, Labour, Security, Insurance, Vendor licences, AMC and Statutory inspections.

17. Analytics Needs to Move Toward Decision Intelligence

Analytics should answer: What happened? Why did it happen? What should management do?

Space: occupancy, utilization, cost/seat, cost/sq.ft. Financial: rent, CAM, FM cost, energy cost, vendor cost. FM: SLA, complaints, quality, recurrence. Asset: uptime, breakdown, PM compliance, lifecycle cost. Vendor: cost, quality, SLA, performance. Experience: employee satisfaction, tenant satisfaction, resolution experience.

18. Master Navigation Needs Standardization

The current Figma uses different navigation structures across leasing, property management and marketplace modules. For the final product, a common OFFICEX shell with role-based navigation is recommended.

Home; Marketplace; Transactions; Workspace; Operations; Assets; Vendors; Commercial; Intelligence.

19. Role-Based UX

Property Owner/Landlord: Portfolio, Occupancy, Revenue, Leasing, Property Health, FM, Assets, Analytics.

Tenant: Workplace, Bookings, Requests, Visitors, Costs, Documents.

Facility Manager: Command Centre, Helpdesk, Assets, PPM, Vendors, Compliance, Analytics.

Vendor: Jobs, SLA, Team, Documents, Invoices, Performance.

Employee: Home, Book, Requests, Visitors, Parking.

20. Mobile Experience

A dedicated mobile UX workstream is recommended. Prioritize desk booking, meeting rooms, requests, visitors, parking, notifications, approvals, technician workflows and asset QR scanning.

21. Design System

Scalezix should establish the complete OFFICEX design system in Figma before extensive screen production. Foundations: colours, typography, spacing, grid, radius, shadows and icons. Components: buttons, inputs, dropdowns, tables, cards, KPI cards, property cards, asset cards, ticket cards, vendor cards, status chips, SLA timers, health scores, alerts, notifications, modals and drawers. Specialized components: Property Score, Workplace Health Score, Asset Health, Vendor Score, Floor Plan, Map, QR Asset Profile and Outcome Score.

22. Prototype Data & Naming Standardization

Please standardize prototype dates and demo data before final design approval. Product naming should be standardized as: OFFICEX — Master Brand; OFFICEX Marketplace — Discovery & Transactions; OFFICEX.PRO — SaaS / Operations Platform; OFFICEX Workplace — Employee / Tenant Experience.

23. Recommended Development Priority

Priority	Required Items
P0 — Critical	Master product architecture; role-based navigation; Property → Building → Floor → Space → Asset hierarchy; Tenant Dashboard; FM Command Centre; OFFICEX Property Score; Workplace Health Score; Lease → Tenant Onboarding
P1 — High	Outcome-Based FM; asset lifecycle; compliance; vendor performance; advanced analytics; workplace booking; mobile workplace; cost intelligence
P2 — Future	AI automation; predictive maintenance; benchmarking; AI contract extraction; smart recommendations; advanced integrations

24. Recommendation — Do Not Start Over

We are not recommending that the existing design work be discarded. The current Figma contains substantial value and should be used as the UI foundation.

- Retain: Marketplace visual language
- Retain: Property search and property detail
- Retain: Leasing dashboard, lead management and pipeline
- Retain: Site visits and LOI / Lease workflow
- Retain: Lease registry
- Retain: FM marketplace and vendor comparison
- Retain: Work orders and vendor rating
- Retain: Payment / escrow
- Redesign / add: Master architecture, tenant, workplace, FM command centre, outcome FM, asset intelligence, compliance, scores, analytics and mobile

25. Target OFFICEX Product Journey

DISCOVER → Property / Vendor / Service

COMPARE → OFFICEX Score / Vendor Score

TRANSACT → Enquiry / RFQ / Visit / Proposal / Negotiation

CONTRACT → Lease / SLA / PO / Escrow

ONBOARD → Tenant / Workspace / Asset / Vendor

OPERATE → Helpdesk / FM / PPM / Assets / Compliance

MEASURE → SLA / Cost / Quality / Experience

OPTIMIZE → Health Scores / Analytics / Benchmarking / AI

26. Requested Next Steps from Scalezix

1. Review the above observations against the existing Figma.
2. Prepare a revised master sitemap / information architecture.
3. Map existing screens against the complete OFFICEX product blueprint.
4. Identify which existing screens can be retained, enhanced or redesigned.
5. Add the missing core screens: Tenant Dashboard, Workplace, Employee Mobile, FM Command Centre, Outcome-Based FM, Asset Management, Asset Detail, Compliance Dashboard, Vendor Performance, Workplace Health, OFFICEX Property Score, OFFICEX Analytics and Tenant Onboarding.
6. Establish the master OFFICEX design system and reusable components.
7. Connect the leasing journey to tenant/workspace onboarding.
8. Share the revised Figma architecture and screen list for review before proceeding to detailed development.

27. Closing Note

We appreciate the effort and thought that has gone into the current UI/UX work. The existing design provides a good foundation, particularly around marketplace, leasing, procurement and FM workflows.

Our objective is not to unnecessarily expand scope or redesign what is already working. Rather, we want to ensure that the product architecture is aligned with the long-term OFFICEX vision before the UI is frozen and development effort becomes expensive to change.

The key objective should be to ensure that OFFICEX is not perceived merely as a property marketplace, leasing CRM or FM vendor marketplace, but as an integrated Operating System for Commercial Workspaces.

Marketplace, Transactions, Workspace, FM, Assets, Vendors, Commercials and Intelligence should operate on a common platform and data architecture.

We therefore request Scalezix to incorporate the above recommendations and share the revised UI/UX architecture, sitemap and updated Figma screens for our review before moving into final development.
